

Release information

Below are the release notes for CADMATIC Draw version 2021T1.

The following conventions apply to these release notes:

- Filenames, pathnames and environment variables are in *italics*.
- Commands, options, dialog names, and menu choices shown in the user interface are in **bold**.

New and improved features

Design views	New design views tool
References UI	New tree user interface for external references: new features: possible to select single color to xref and color fading possible to use IFC model to external reference
Visualization	New visualization styles and totally new render technology
View clipping	New view clipping tools
Coordinate angle	Easy way to normalize view in single command
DRW format	DRW files consume less disk space
Viewports	Limit of same time active viewports in paper space have been increased up to 300
Help	<p>The help functionality has been renewed.</p> <p>A new help technology has been taken into use. The technology used previously showed help topics in a separate help window, which was installed with the CADMATIC software. The new technology shows help topics in user's default browser (Edge, Firefox, or Chrome, for example). The help topics are now easier to read, and especially the search operations are much more comprehensive than before. In terms of using the software, the help works as before: the help topics open with the Help buttons in the dialogs and the Context Help command.</p>
